

In the specification:

Please amend paragraph [0020] as follows:

[0020] Figure 1 shows a refuse bin according to the invention which is referred to in its entirety by the reference number 9. The refuse bin includes a receptacle 11 which, in principle, is largely cylindrical (also see Figure 4) and a ring 10 which is placed onto the upper edge region of this receptacle 11. The receptacle 11 of the refuse bin is an inner bucket for a refuse container, i.e. the receptacle 11 is placed into a larger refuse container (not illustrated here). However, the receptacle 11 may, in principle, also be used separately as a refuse bin. In order to take the receptacle 11, i.e. the inner bucket, out of a refuse container or else in order otherwise to lift up the receptacle 11, a hoop 13 is provided which can be seen in figures 2 and 4. In figure 4, this hoop 13 ~~hop 3~~ is illustrated in the horizontal rest position, in which it is laid down, and the hoop can be pivoted about a horizontal pivot axis 13a (see figure 4) into a vertical position, so that the receptacle 11 can be lifted up by the hoop 13 being grasped.
